## ASSIGNMENT 7

Three separate two-period cross-over studies were performed based on different groups of subjects. In study $\mathbf{1} \mathbf{0 . 6 2 5} \mathbf{~ m g}$ estrogen was compared with placebo. In study $2,1.25 \mathrm{mg}$ estrogen was compared with placebo. In study $\mathbf{3 , 1 . 2 5} \mathbf{~ m g}$ estrogen was compared with $\mathbf{0 . 6 2 5} \mathrm{mg}$ estrogen. Subjects received treatment for $\mathbf{4}$ weeks in each active treatment period; a 2-week washout period separated the two active periods. Data are given in file estrogen.dat and have the following form:
